Product: Ascom i75® Accessories

Carrying, headset and charging options
for any situation

ASCOM i75® ACCESSORIES CUSTOMISE FOR CONVENIENCE

The wide range of accessories for the Ascom i75® makes it possible to adapt this unique tool to any work situation. The accessories include different types of headsets for handsfree use even in noisy environments, a leather case for extra protection, a security string, battery chargers and more.

Carrying options

Carrying your i75 handset has never been more comfortable. It comes with a standard hinge-type clip but can also be mounted on belts using a swivel-type clip. A flat cover plate can be ordered if you prefer to carry it for example in your shirt pocket or if you plan to use our customised leather case with a transparent front. Available for extra security is an 80 cm long security string to be attached to the hinge-type clip.

Headset options

For convenient handsfree use, attach one of our headsets with the microphone on a boom or integrated in the cable. In especially noisy environments, you may want to try our robust headset with hearing protection. Protection plugs are available for those times when a headset is not needed.

Charging options

For quick charging, you can choose between a desktop charger for single handsets and a wall mounted charging rack for multiple handsets. Our data sheets will give you more information about each charger. If you have forgotten to charge your handset, an extra battery pack can come in handy, which can be charged in the wall-mounted battery pack charger. This enables 24h use of the handsets.
